

Slurry Seals

Crews will be in your neighborhood to apply a slurry seal to your roadway. A slurry seal is a thin layer of black asphalt emulsion and aggregate that will help protect the road from weathering.

There are a few things to keep in mind:

1. Please do not park on the road. Any parked vehicles will be towed at the owner's expense. Salt Lake County's crews will deploy a variable message board or send a reminder a minimum of two days before the work is performed. The actual work may be performed by a subcontractor for Salt Lake County.
2. Please trim your trees and adjust mailboxes. The large equipment can damage low lying limbs or protruding mailboxes. The city is not responsible for any damage within the right-of-way.
3. Please observe all signs and flagman's directions.
4. You will have limited access to your driveway during the overlay process. The crew members are there to assist you.
5. The slurry seal can leave oil and residue on the surface of the road. Don't walk or drive on these fresh oils, as they may be tracked onto your driveway and/or into your house.

We look forward to this opportunity to improve your roadway. Thank you for your cooperation.
